Carnegie Mellon University has struck an agreement with [New York City](#) and [Steiner Studios](#) to create a new academic program focused on the intersection between the arts and technology, the parties announced Wednesday. The Integrative Media Program, as it will be known, will be located at Steiner Studios at the Brooklyn Navy Yard.

The Carnegie Mellon program will provide training in creative industries that integrate technology and the arts and will focus on research and education in film, gaming, social media and big data, interactive computing, the performing and visual arts and urban planning.

In addition to \$3.5 million contributed by New York City, Carnegie Mellon U. also announced an anonymous multimillion-dollar gift that will go toward the establishment of the program.

Announcement is latest in New York City's "Applied Sciences NYC initiative," which was created to expand the city's applied sciences and engineering campuses and help spur economic growth and increase the city's global competitiveness. The initiative offered to provide land owned by New York City, seed investments of NYC capital and the full support of the administration of New York City Mayor Michael R. Bloomberg to universities interested in establishing or expanding applied sciences and engineering programs in the city.

The announcement was made by Mayor Bloomberg, Carnegie Mellon provost Dr. Mark Kamlet and Steiner Studios chairman Douglas C. Steiner.
